

This chart courtesy www.macrotrends.net, compares the current price of gold as of June 2015, to the US Monetary Base. The time to sell your gold is when this ratio rises above 2.50. The time to buy gold is right now, with the ratio at 0.20. Gold is now the cheapest for at least the last 100 years! And of course the same holds for silver, since silver is steadily being used up, while gold gets recycled.
